In Depth

SMARTSTORE succeeds in optimising logistics activities of Galician ports

*The project will celebrate the event for the dissemination of its final results tomorrow. The technologies developed such as Digital Twins, robotics and Artificial Intelligence will allow automatization of the processes of reception, classification and storage of products in the maritime sector. CETIM took part in the research together with the companies PROTEA Productos del Mar, Internacional de Comercio y Servicios, P&J Carrasco and the consortium leader GALIGRAIN (Grupo Nogar).*

Events

**6th, 7th and 8th September - France** | CETIM will participate in the '11th International Conference on Life Cycle Management', one of the world's leading forums on environmental, economic and social sustainability. You will be able to meet our colleagues from the Sustainability Analysis team, who will explain the importance of Life Cycle Analysis in the projects we develop in our Technological Centre.
