In Depth Interview

We achieve more sustainable and high added value cementitious solutions for industry in the KEOPS project

CETIM has developed in KEOPS, with the collaboration of the industrial fabric, a new binding material from construction and demolition waste and iron and steel slag, in order to minimise the environmental impact of the production of this type of waste. The R&D project that is now coming to an end began its first stage at our Technological Centre, so our Sustainable Construction Materials team developed and optimised different fast-setting, low-rebound geopolymeric formulations for shotcrete applications, for capturing heavy metals for environmental remediation and high chemical resistance for concrete resistant to chlorides and sulphates.

Events

27th February 2024 - Brussels | The project led and coordinated by CETIM, BIORECOVER, comes to an end with an event that will bring together the scientific and industrial community to deepen in the biomining technologies developed in the project. The conference will take place on 27 February at the Spanish Office of Science of Technology in Brussels and our colleague Cristina Martínez, Head of ECO BIO Technologies at CETIM, will give an overview of BIORECOVER and present the main results obtained.

20th, 21st and 22nd March - Málaga | CETIM will participate again this year in Transfere, the European Forum for Science, Technology and Innovation, which will be held on 20th, 21st and 22nd March at the Trade Fairs and Congress Centre of Malaga (FYCMA). The event's Organising Committee has already announced that this year's edition will include some new features compared to previous years, such as the creation of an area of technological demands and market needs.
