In Depth Interview

CETIM will digitalise the construction sector through two cutting-edge research projects

Francisco Vea Folch

Innovation and New Technologies Manager at Simetria Grupo

One of the initiatives is SMART CONSTRUCTION MANAGER, which will improve the control of site management and the supply chain of materials through a common-use tool that incorporates different 4.0 technologies such as Artificial Vision, Digital Twins or Internet of Things devices. Along the same line, we are developing 0ACCIDENTES, Best National Innovation Project 2023 according to the Spanish Construction Technology Platform, to increase surveillance of the construction site and help prevent and guarantee faster action in the event of accidents at work.

"What we like most about CETIM is its proximity and ability to adapt to the changes that arise in the projects"
