In Depth

CETIM and Aira, A key partnership driving sustainability, digitalisation and competitiveness in the agri-food sector

*CETIM is part of the OMIPERBIO Cervera Network of Excellence, a new project focused on producing microbial proteins, phenolic compounds and other bio-based ingredients from a range of by-products through the application of omics technologies. One of the project's main end-use applications will be animal nutrition, particularly within the dairy cattle sector, where we will collaborate with Aira, Galicia's leading agri-food cooperative. This strategic partnership for the future of the sector has already been demonstrated through other initiatives such as AURORA, a project in which we are developing an integrated strategy based on biopesticides and digital technologies to reduce the incidence of crop diseases, and EDIH DATAlife, where we developed an innovative unified web platform to digitalise and optimise Aira's operational management.*

Events

CETIM at Battery & Energy Storage Tech Europe | 8th and 9th September 2026

CETIM will participate in one of Europe's leading events dedicated to energy storage technologies and industrial battery applications, taking place in Barcelona. The forum will address key challenges and opportunities facing the sector, including next-generation battery chemistries, digitalisation through the Battery Passport, energy storage system integration, operational safety, component reuse, and strategies for the recycling and recovery of critical materials.

Circular economy demonstration day | 6th October 2026

As part of the Circular Excellence initiative, CETIM will host a Circular Economy Demonstration Day at its facilities. The event will showcase technologies and solutions developed by CETIM in the fields of energy storage, sustainable polymers and construction materials, green hydrogen, water treatment and Industry 5.0.
